From tube trailers, tank trucks,
and one-ton containers to
cylinders and lecture bottles,
when it comes to process
chemicals—including chlorine-
based products, methylamines,
and hydrocarbons—no supplier
offers more packaging options to
help keep you under the RMP
limits than Air Products.

Introducing a new concept in process chemicals delivery.

Options!

If you need process chemicals in less-than-railcar quantities—even a whole lot less—Air Products can provide a wide variety of the products you need, when you need them, and help you stay under the new EPA Risk Management Plan (RMP) limits.

With more than two dozen container sizes to choose from, Air Products offers a selection of process chemicals in the widest range of supply options available in the industry. If one of our off-the-shelf packages isn't precisely the right fit to keep you below the RMP limits, we can

help by short-filling containers or scheduling just-in-time deliveries.

And when you need process chemicals quickly, Air Products really delivers. We are the world's leading supplier of products such as repackaged ethyl chloride and fluorine-based chemicals, with operations in 30 countries and more than 150 stocking locations in North America alone to serve you. Using our own fleet of trucks or an approved carrier, we can ship products to you fast. If you have an emergency shortage or even a planned outage, such as a plant turnaround, our supply and delivery capabilities can save the day.

Air Products is also a safety expert. We offer our customers comprehensive safety training and round-the-clock emergency response, provided by our own specially certified Air Products teams.

The bottom line? Air Products will do what it takes to get you the right quantity of chemicals, at the right time, to help you downsize your on-site supply, cut your RMP red tape, and keep your business operating safely.

For a *free* copy of the Air Products Process Chemicals Catalog, or to speak to a sales representative, call 1-800-654-4567, press 3, and ask for extension 54. You can also visit our website at <http://www.airproducts.com/processchem/>.

From tube trailers, tank trucks, and one-ton containers to cylinders and lecture bottles, when it comes to process chemicals—including chlorine-based products, methylamines, and hydrocarbons—no supplier offers more packaging options to help keep you under the RMP limits than Air Products.

**With our
process chemicals
delivery options,
peace of mind comes
in many sizes.**

The new EPA Risk Management Plan (RMP) limits are something you need to think about almost every time you place a process chemicals order. The last thing you want is a railcar full of product, if you only need a portion of it.

Now there's a choice.

Air Products offers a broad selection of process chemicals in the widest range of packaging options in the industry—more than two dozen container sizes in all! If one of our off-the-shelf packages

isn't precisely right, we'll find another way to get you the products you need, when you need them, and help keep you under the RMP limits. Perhaps delivering 900 lb of hydrogen fluoride in a one-ton container will do it. Or shipping product in “tonners” instead of railcars. Or scheduling just-in-time deliveries via tube trailer.

With more than 150 stocking locations in North America alone, we can supply products to you fast. If you have an emergency shortage or even a planned outage, our delivery capabilities can prevent some major headaches.

And our unsurpassed safety expertise—including round-the-clock emergency response, provided by our own specially certified Air Products teams—will give you one less thing to worry about.

So if RMP issues are hanging over your head, call Air Products today. We'll do what it takes to get you the right quantity of chemicals at the right time to help downsize your on-site supply and help your business operate safely.

when it comes to process
chemicals—including chlorine-
based products, methylamines,
and hydrocarbons—
no supplier offers more
packaging options to suit your
needs than Air Products.

When it comes to process chemicals delivery, size does matter.

Of course, there may be occasions when you need process chemicals in railcar quantities, but often you need less—sometimes much less. That's when many other suppliers come up short. With more than two dozen packaging options to select from, Air Products offers a broad line of process chemicals in the widest variety of less-than-railcar containers available in the industry. When you work with Air Products, you receive the chemicals you need, when you need them, in just the quantity you require. If one of our standard packages isn't an

exact fit, we'll develop a supply plan that's tailored for you. Maybe that means scheduling just-in-time delivery of hydrogen chloride via our own fleet of tube trailers. Or perhaps we'll arrange to fill a one-ton container with 900 lb of hydrogen fluoride. If we supply the chemical you're looking for, we'll do what it takes to meet your requirements. And the benefits of working with Air Products include much more than an unparalleled selection of packages.

Taking advantage of our wide array of supply options can streamline your operations by helping to keep you under the EPA Risk Management Plan limits. Our rapid delivery—from more than 150 stocking locations in North America alone—can save the day during an emergency shortage or a planned outage. And our unsurpassed safety expertise and

service, including round-the-clock emergency response provided by a dedicated Air Products team, can offer you all-important peace of mind.

Try Air Products on for size. Call us today for a *free* copy of our Process Chemicals Catalog or to speak to a sales representative. Just dial 1-800-654-4567, press 3, and ask for extension 54. Or visit our website at <http://www.airproducts.com/processchem/>.

From tube trailers, tank trucks, and one-ton containers to cylinders and lecture bottles, when it comes to process chemicals—including chlorine-based products, methylamines, and hydrocarbons—no supplier offers more packaging options to help keep you under the RMP limits than Air Products.

When it comes to process chemicals delivery, options are key.

Getting the chemicals your business needs, while trying to keep your on-site supply under the Risk Management Plan (RMP) limits, can put you in a serious bind. Especially if you've been ordering product by the railcar when you actually require a lot less.

Now Air Products lets you choose from a wide variety of process chemicals, delivered where and when you need them, in less-than-railcar quantities.

With more than two dozen container sizes to select from, Air Products offers a broad line of products in the widest range of supply options available in the

industry. If one of our off-the-shelf packages isn't the perfect size to meet your requirements and keep you under the RMP limits, we'll help by short-filling containers or scheduling just-in-time deliveries.

Air Products is the world's leading supplier of products such as repackaged ethyl chloride and fluorine-based compounds. We have more than 150 stocking locations in North America alone. Using our own fleet of trucks or an approved carrier, we're ready to serve you. Fast.

And our service doesn't end there. We offer our customers comprehensive safety training and round-the-clock emergency response, provided by our own Air Products teams. You can also count on Air Products technical support to help you select the right on-site delivery system —up to and including turnkey installation.

In short, we've got what it takes to deliver products in the quantity you need to help keep the EPA satisfied and to help your business operate safely, so you have more freedom to do what you do best.

and hydrocarbons—no supplier
offers more packaging options
to meet your needs than
Air Products.

In an emergency, Air Products can bring you just what you need.

If you rely on timely delivery of process chemicals, you're probably familiar with the things that can go wrong. For whatever reason, your supplier doesn't come through. Maybe the railcar you ordered gets stranded in Dubuque. Or the shipment you need on May 15th somehow gets scheduled for the 25th. Perhaps you have an emergency outage or even a planned maintenance project and you need backup for your bulk supply.

In almost any situation where you need process chemicals in less-than-railcar quantities, Air Products can step in to fill your urgent requirements. That's because we offer a broad selection of

process chemicals in the widest range of supply options available in the industry. If one of our more than two dozen off-the-shelf packages isn't precisely the right fit, we'll do what it takes to accommodate your needs, including short-filling containers or scheduling just-in-time deliveries.

With operations in 30 countries, Air Products is the world's largest repackager of hydrogen chloride and ethyl chloride and the leading supplier of fluorine-based compounds. When you work with us, the products you need arrive where and when you need them, delivered via our own fleet of trucks or an approved carrier, from one of our more than 150 stocking locations in North America alone.

Air Products also provides comprehensive technical support and unsurpassed safety service for our customers, including round-the-clock emergency response provided by

trained Air Products teams.

If you find yourself without a paddle, call Air Products immediately. Our unsurpassed packaging options and delivery capabilities can help keep your operation flowing smoothly.
